Weights and Dimensions

Gross vehicle mass 3,000kg	0WQ	•	•	•	•
Gross vehicle mass 3,200kg with harder springs and shocks (Increases payload by approx. 200kg).	PG1	\$2,800	\$2,800	\$2,800	\$2,800
Payload Single Cab chassis in kg, maximum. Manual (DSG)		1,423 (1,397)	1,408 (1,381)	1,347 (1,330)	1,332 (1,315)
Payload Double Cab chassis in kg, maximum. Manual (DSG)		-	1,382 (1,291)	-	1,242 (1,225)

*Maximum Retail Price (MRP) includes 15% GST and does not include on-road costs. Figures will change depending on model derivative and equipment fitted. All measurements listed are based on standard specification vehicles. The actual dimensions may differ slightly from the values stated here. Equipment may affect the unladen weight. A vehicles' actual payload, which is the difference between the gross vehicle weight and the unladen weight, can only be determined by weighing the individual vehicle. Specifications are subject to change without notice. Fuel consumption tested in accordance with EC directive 1999/94/EC and based on NEDC procedure unless stated otherwise. The fuel consumption is measured on European specification cars and may vary depending on specification, road condition, tyres and driving behaviour. Please refer to brochure for further information. Issued 20 December 2018.

3-Way Tipper – Fact Sheet

Three-way tipper with cab guard for cab rear panel

The VW 3-Way tipper is developed and engineered by a VW Premium Partner in Germany. The engineering and manufacturing is completed to VW Standards. The Tipper is available for Single Cab and Double Cab Transporters and also for Amarok and Crafter. Further to that, it is available in Manual and DSG and 4MOTION and 2WD. A cab guard protects the passenger and driver cabin during operation.

The tipper has a second battery (maintenance free) and a cutoff relay, which allows tipping without ignition on and hence no influence on the main vehicle battery. The tray is made of Aluminum and the frame is high quality welded and completed in hot-dip galvanization for highest possible protection and a long-term rust protection. The

*Maximum Retail Price (MRP) includes 15% GST and does not include on-road costs. Figures will change depending on model derivative and equipment fitted. All measurements listed are based on standard specification vehicles. The actual dimensions may differ slightly from the values stated here. Equipment may affect the unladen weight. A vehicles' actual payload, which is the difference between the gross vehicle weight and the unladen weight, can only be determined by weighing the individual vehicle. MY19

floor of the tray is an original Finnish screen print with special surface coating. There are 6 lashing rings in the tray which can be used for securing goods. The maximum force for securing goods with the lashing rings is 400kg with a minimum angle of 30 degrees. The loading is possible from both sides and the rear as all 3 tray-sides fold down with an angle lever lock on the left and right. The entire electric and hydraulic installation is waterproof and done under German Quality Standards. The Product is certified under European Standards and also TÜV-tested (cert. as per §13 EG-FGV, entry in registration certificate, Test number LS 100863 Safety Loads).

The tipping force is generated by a BOSCH Rexroth hydraulic pump. The hydraulic unit can lift the payload, which is defined by the model. Hence there is no lifting limitation by the tipper itself. The fixing point is ball bearing stamp with a grease nipple. The hydraulic fluid container is located directly next to the pump and supplies the fluid to the pump and cylinder.

The fenders are available in plastic and steel. The tipper is operated by remote control in the driver's cab and is connected to a 1.5m cable allowing use outside the cab. Further to that the remote control can be fixed with two magnets. The tipper has a maximum angle of 50 degrees. At 50 degrees it will stop automatically. For safety reasons, a sound is generated after reaching 30 degrees.

The standard tipping function is rear tipping. This means two bolts have to be fixed in the rear frame in order to allow the rear tipping. For tipping on the side, one bolt has to be changed to the front left or right side in order to fix the side tray and allow the sideward tipping.

IMPORTANT:

Never use the tipping function without bolts or with only one bolt. It is crucial that both bolts are always used during tipping.

*Maximum Retail Price (MRP) includes 15% GST and does not include on-road costs. Figures will change depending on model derivative and equipment fitted. All measurements listed are based on standard specification vehicles. The actual dimensions may differ slightly from the values stated here. Equipment may affect the unladen weight.
